

①

this.http.get()
 .map(x => x.json)
 .retry(10)
 .subscribe(x => this.talks = x);

Observable

getAllTalks()

return this.http
 .get()
 .map(x => x.json())
 .retry(10);

Service

getAllTalks():
Observable<Army<...>>

constructor(private talkService: talkService)

this.talkService.getAllTalks()

.subscribe(x => this.talks = x)

Component

Nos subscribimos
al servicio y al put final

Observer

- solo existe cuando hay alguna esachada.

subscribe

callback

~~next => result~~

x => this.talks = x;

onNext

error => { }

onError

() => { }

onFinally

o periodo

• Event Multiplex

Observable.interval(100)

• subscribe (x \Rightarrow console.log(x));

• Observer

map, etc...

• Combining

let obs1 = ...

let obs2 = ...

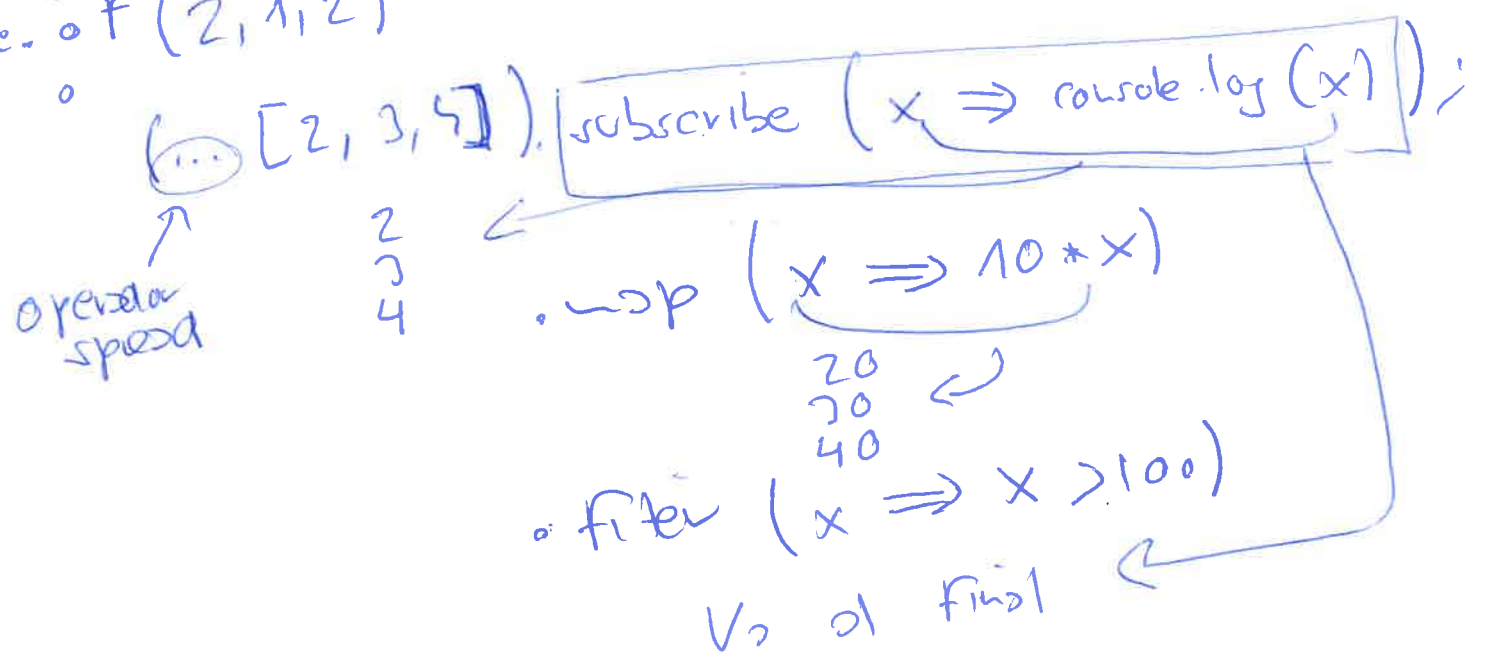

return obs1.merge(obs2);

• scheduler.

RxJS basics

A) http.get \rightarrow devuelve Observable

B) Observable.of(2, 1, 2)

C) Observable.from([2, 3, 4])

Diagram de cable.

Usando Rx

@ViewChild('search') search

ngOnInit {
 console.log(this.search)

Eleether;

local input variable
#search

ActiveElement
DOM

was detected
de que lo ejecutó

was detected
de que lo ejecutó

app ios
app android

Observable, fromEvent (this.search, nativeElement, 'keyup')

• subscribe (x => console.log(x))

• map (x: any) => console.log(x.target.value)

Arrow function

• filter (x => x.length > 0)

step 5 a built-in function

debounceTime (500)

↳ solo unis eventor cada x tiempo

• distinctUntilChanged

↳ filter repetidos

http

• switchMap (x => this.talkService.getFilteredBbs(x))

• subscribe (x => this.talk = x)

↳ filtrado de charas por bursado

↳ Cancela petra cuando apren oth.

~~Nx Annotate~~

Operadores habituales

Observable.create

range -> repeat

interval

empty

throw

crear

buffer / window
